mofiria Corporation, newly-established company deploying business by finger vein authentication technology

On December 2010, we have established new corporation, mofiria Corporation (hereinafter called “mofiria”) targeting develop/distribute devices and solutions adopted finger vein authentication technology.

Planned business commencement will be in March 2011. mofiria has received licensing technology regarding finger vein authentication from Sony Corporation (hereinafter called “Sony”) propelling individual authentication solution and will aim for global business deployment.

mofiria provides finger vein authentication technology that was initially developed by Sony publicly announced in February 2009. mofiria delivers small, fast, high-accuracy and comfortable operability to give versatility to embed on mobile devices such as PC and Mobile Phone. “FVA-U1” was the first product which incorporates this technology and was introduced to the market in December 2009.

mofiria corporation will keep existing customers and further promote individual authentication solution by their superior technologies in biometrics authentication field.
