# How To Place a Finger Correctly

mofiria

To successfully perform enrollment and authentication, it is important to place your finger in the correct position and accurately capture the vein information

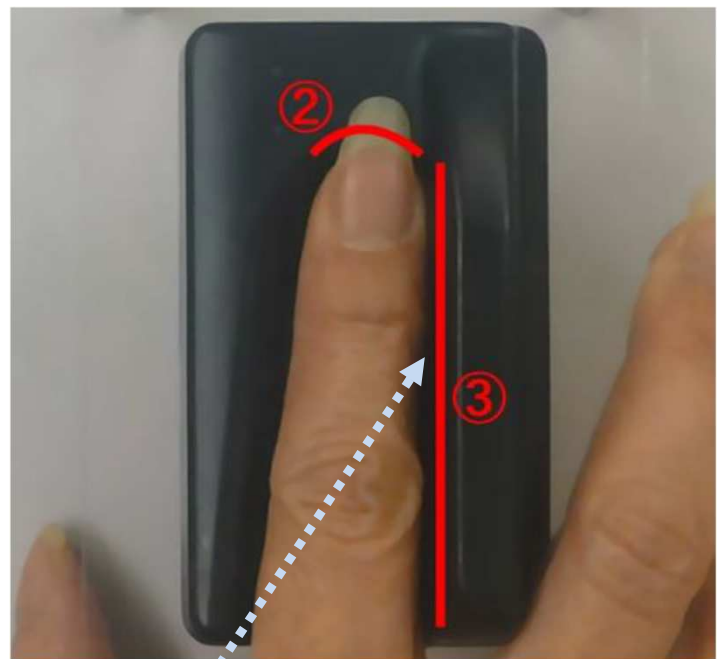

① Gently place your finger on the finger placement detection area so that your fingertip touches the finger placement marker (raised part).

※The photos and illustrations show the FVA-U4ST.
The guidance applies similarly to the M2ST and embedded versions as well.

※Please be careful **not** to press too hard

The finger-side should lightly touch the right wall.

② Align the fingertip (not the nail) with the tip of the indentation

③ The finger-side should lightly touch the right wall.
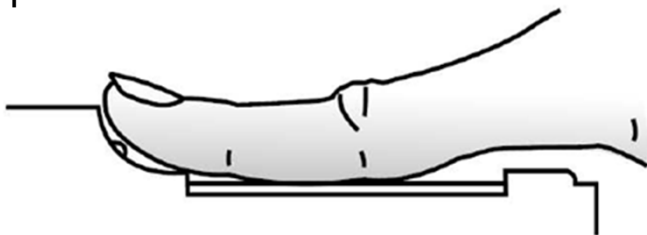

Incorrect finger placement

mofiria

× The finger is placed at an angle.

×The fingertip is not positioned correctly.

×The finger is being pressed too hard.

×The finger is bent.

×The finger is placed in a rotated position.

×The finger is lifted / not fully in contact.
